B-to-C e-commerce
E-Government

About VASCO:

VASCO designs, develops, markets and supports patented "Identity Authentication" products for e-business and e-commerce. VASCO's strong user authentication software is delivered via its Digipass security products, small "calculator" hardware devices carried by an end user, or in a software format on mobile phones, other portable devices, and PCs. For user access control, VASCO's VACMAN products guarantee that only designated Digipass users get access to the application. VASCO's target markets are the applications and their several hundred million users that utilize fixed passwords as security.
