Versatile Secure Digital Certificate Storage and Usage

FortiToken 300 is a Smart Card USB token that is a USB-interfaced device offering a variety of security capabilities including certificate-based public key infrastructure (PKI) authentication, digital signing, encrypting/decrypting files such as emails and documents, VPN client authentication, and more.

In digital certificate-based PKI applications, private keys play an important role in asymmetric cryptography. The FortiToken 300 is a high-security PKI based token that ensures private keys are generated, stored and used internally in a secure chip, meaning the keys are never at risk of being stolen. The FortiToken 300 token is FIPS 140-2 validated and fully certified to ensure this level of protection meets the highest standards. The FortiToken 300 token is a USB-interfaced device that requires no drivers (i.e., driverless) for most operating system (OS) including Windows, macOS, and Linux. It is natively recognized by the OS, making it easy to use with no plugins necessary. Cryptographic Applications can be authenticated with the FortiToken 300 token based on Microsoft Cryptographic Application Programming Interface (CAPI)* and Public-Key Cryptography Standards (PKCS) #11**.
