(A) VM-Series performance will vary based on underlying virtualization infrastructure (hypervisor/cloud). Refer to the individual datasheets for detailed performance and testing information. (B) Each result in this column is for an optimum combination of PA-7000-DPC-A and PA-7000-100G-NPC-A cards populated in all available slots. (C) All tests performed with 2 Networking Cards + 4 Data Processing Cards populated, unless otherwise noted. (D) This test performed with 1 Networking Card + 5 Data Processing Cards populated. (E) Adding virtual systems to the base quantity requires a separately purchased license. (F) Optical/Copper transceivers are sold separately. (G) CPU oversubscription supported with up to 5 instances running on a 2-CPU configuration. (H) 60 GB required at initial boot. VM-Series will use 32 GB after license activation. (I) "Bring your own license" deployment option. (J) "Pay as you go" deployment option.

## Palo Alto Networks ML-Powered Next-Generation Firewall Specifications and Features Summary

Table 2: Key Features

Next-Generation Firewall	Supported Across All Models
Deep visibility and granular control for thousands of applications; ability to create custom applications; ability to manage unknown traffic based on policy	✓
User identification and control: VPNs, WLAN controllers, captive portal, proxies, Active Directory, eDirectory, Exchange, Terminal Services, syslog parsing, XML API	✓
Granular TLS/SSL decryption and inspection (inbound and outbound); includes support for TLS 1.3 and HTTP/2 protocols	✓
Networking: dynamic routing (RIP, OSPF, BGP, multiprotocol BGP), DHCP, DNS, NAT, route redistribution, ECMP, LLDP, tunnel content inspection	✓
QoS: policy-based traffic shaping (priority, guaranteed, maximum) per application, per user, per tunnel, based on DSCP classification	✓
Virtual systems: logical, separately managed firewall instances within a single physical firewall, with each virtual system's traffic kept separate	✓
Zone-based network segmentation and zone protection; DoS protection against flooding of new sessions	✓
<b>Threat Prevention (subscription required)</b>	
Inline malware prevention automatically enforced through payload-based signatures, updated daily	✓
Vulnerability-based protections against exploits and evasive techniques on network and application layers, including port scans, buffer overflows, packet fragmentation, and obfuscation	✓
Command-and-control (C2) activity stopped from exfiltrating data or delivering secondary malware payloads; infected hosts identified through DNS sinkholing	✓
<b>URL Filtering (subscription required)</b>	
Automatic prevention of web-based attacks, including phishing links in emails, phishing sites, HTTP-based C2, and pages that carry exploit kits	✓
Ability to stop in-process credential phishing	✓
Custom URL categories, alerts, and notification pages	✓
<b>IoT Security (subscription required)</b>	
Accurate identification and classification of all devices on a network, including never-before-seen devices	✓
Device security via ML-based anomaly detection, vulnerability assessment, risk-based policy recommendations, and enforcement with the Device-ID policy construct (Device-based policy enforcement not available on the VM-50, VM-50 Lite, or CN-Series)	✓
No additional infrastructure required to enable on Next-Generation Firewalls	✓
<b>WildFire malware prevention (subscription required)</b>	
Detection of zero-day malware and exploits with layered, complementary analysis techniques	✓
Automated prevention in seconds for most threats across networks, endpoints, and clouds	✓
Community-based data for protection, including more than 30,000 subscribers	✓
<b>AutoFocus threat intelligence (subscription required)</b>	
Contextualization and classification of attacks, including malware family, adversary, and campaign, to speed triage and response efforts	✓
Rich, globally correlated threat analysis sourced from WildFire	✓
Third-party threat intelligence for automated prevention	✓
<b>DNS Security (subscription required)</b>	
Automatic prevention of tens of millions of malicious domains identified with real-time analysis and continuously growing global threat intelligence	✓
Quick detection of C2 or data theft employing DNS tunneling with machine learning-powered analysis	✓
Automated dynamic response to find infected machines and quickly respond in policy	✓
<b>File and data filtering</b>	
Bidirectional control over the unauthorized transfer of file types and Social Security numbers, credit card numbers, and custom data patterns	✓
<b>GlobalProtect network security for endpoints (subscription required)</b>	
Remote access VPN (SSL, IPsec, clientless); mobile threat prevention and policy enforcement based on apps, users, content, device, and device state	✓
BYOD: app-level VPN for user privacy	✓
<b>Panorama network security management (subscription required for managing multiple firewalls)</b>	
Intuitive policy control with applications, users, threats, advanced malware prevention, URLs, file types, and data patterns all in the same policy	✓
Actionable insight into traffic and threats with Application Command Center (ACC); fully customizable reporting	✓
Aggregated logging and event correlation	✓
Consistent scalable management of up to 30,000 hardware and all VM-Series Firewalls; role-based access control; logical and hierarchical device groups; and templates	✓
GUI, CLI, XML-based REST API	✓
