

Prisma: Cloud Governance & Compliance

Meet your security and compliance objectives with ease

Overview

Ensuring your cloud resources and software-as-a-service (SaaS) applications are correctly configured and adhere to your organization's security standards from day one is essential to prevent successful attacks. Additionally, making sure these applications as well as the data they collect and store are properly protected and compliant is critical to avoid costly fines, a tarnished image, and loss of customer trust. Meeting security standards and maintaining compliant environments at scale, and across SaaS applications, is the new expectation for security teams.

The Challenges of Cloud Governance and Compliance

Despite the availability of numerous tools, most organizations struggle to effectively control their data exposure and enforce security policies across ever-changing cloud environments and SaaS applications. Furthermore, ensuring compliance where data is stored across distributed environments puts a significant burden on your already constrained security teams.

What You Need

Ensuring governance and compliance across multi-cloud environments and SaaS applications requires:

- **Realtime discovery and classification** of resources and data across dynamic SaaS as well as platform- and infrastructure-as-a-service (PaaS and IaaS) environments.
- **Configuration governance**, ensuring application and resource configurations match your security best practices as soon as they are deployed, and preventing configuration drift.
- **Access governance** using granular policy definitions to govern access to SaaS applications and resources in the public cloud as well as to apply network segmentation.
- **Compliance auditing**, leveraging automation and built-in compliance frameworks, to ensure compliance at any time and generate audit-ready reports on demand.
- **Seamless user experience** that doesn't force additional steps or introduce significant latency in the use of applications as you add new security tools.

The Right Approach

Prisma™ is the industry's most complete cloud security offering for today and tomorrow. It accelerates your journey to the cloud by providing unprecedented risk visibility as well as consistently governing access, protecting data, and securing applications.

Prisma continuously monitors your distributed multi-cloud environments and SaaS applications, dynamically discovers resources as soon as they are deployed, and ensures that they adhere to your security and compliance standards. It even automates remediation so you can embrace the cloud with confidence.

Prisma Cloud helps your organization ensure any deployed resource, even across multi-cloud environments, is correctly configured and adheres to your security standards from the moment it's deployed. Additionally, ensuring continuous compliance and generating audit-ready reports are transformed from multi-month headaches to just a few clicks. Prisma Cloud continuously monitors your cloud environments, discovering and assessing the configuration of newly deployed resources in real time and matching configurations against the industry's most complete library of policies and compliance frameworks, including CIS, NIST, PCI DSS, HIPAA, GDPR, ISO, SOC 2, and more.

Prisma SaaS controls access to and usage of SaaS applications. With complete visibility into all user, folder, and file activity across SaaS applications, you can quickly determine if there are any policy- or compliance-related violations. Prisma SaaS enables on-demand compliance reporting by providing a library of compliance frameworks.

VM-Series Virtualized Next-Generation Firewalls enforce access policies to govern access to public cloud environments. In addition, they enable organizations to meet regulatory mandates where network segmentation is a requirement.

Built for the Future

No matter where you are on your journey to the cloud, Prisma can help:

- Cloud-enabled mobile workforce
- Cloud-connected branch
- Zero Trust cloud security
- Cloud governance and compliance
- Cloud data protection
- Cloud threat protection
- Secure DevOps
